Reasons for Allowance

The independent claims recite advertising methods using long range and short range transceivers and a limitation for the following:

"sending a second, longer or larger, part of the advertisement via short range telecommunications, the second part of the advertisement being transmitted after the consumer device has screened the first part of the advertisement and has requested the second part"

The prior art references teach advertising using short range and long range transceivers. The primary reference teaches receiving a first part of an advertisement using short range transceiver and a second part of the advertisement using long range transceivers. The secondary reference teaches receiving first and second parts of advertisements using short range transceivers. Examiner noted the arguments in the Remarks but believes the references are not combinable to achieve the claims. This is because the primary reference already receives second parts of advertisements using long range transceivers. It would not make sense to perform the same second parts using short range transceivers. New search updates revealed no other prior art which teaches the limitation in the context of the claims. Therefore, Claims 1-18,20-22 and 38-39 are indicated allowable.
